MOZDÖM
Tool & Knife

EXCEPTIONAL QUALITY. INCREDIBLE VALUE. OLD WORLD HAND CRAFTSMANSHIP

CONDOR

Tool & Knife

CONDOR® TOOL & KNIFE traces its proud history back to 1787, the year GEBR WEYESBERG COMPANY was founded in Solingen, Germany.

The quality of the swords, military knives, agricultural tools and household cutlery they manufactured made Solingen the cutlery capital of the world. Over the generations, the world's largest manufacturer of swords and knives found it necessary to expand operations to other countries to better serve its customers.

In 1964, the company formed IMACASA® with a new plant in Santa Ana, El Salvador, filling it with state of the art German equipment and sending some of their local employees to Solingen for extensive training. Today, the factory is turning out the finest quality machetes, knives, axes, shovels and other hand tools.

IMACASA's Central American operations were sold in the 1980's to local investors. Today, IMACASA® is one of the largest machete and shovel manufacturers in the world operating 24 hours a day, 7 days a week to fill an increasing worldwide demand for its products.

In 2004, IMACASA® developed a first quality line of tools and knives for the North American and European outdoor markets. CONDOR® TOOL & KNIFE was born.

CONDOR® PRODUCT FEATURES

CONDOR® BLADE MATERIALS

BLADES are made from English 420 HC (High Carbon) surgical quality Stainless Steel or German 1075 High Carbon Steel and are heat treated and annealed to about 52-54 Rockwell for the machetes (a measure of hardness) and 56-58 for the knives. Every edge is hand finished and polished to razor sharpness.

AXE HEADS AND SHOVEL BLADES are made from 1045 High Carbon Steel. Axes are heat treated and annealed to 45-50 Rockwell (a measure of hardness) and shovels to 40-45.

VACUUM ASSIST INVESTMENT CASTING is a special manufacturing process that we use to make some of our axes and knives in 440C Stainless Steel. This process allows for greater product detail and strength.

CONDOR® BLADE FINISHES

BLASTED SATIN FINISH is achieved by sand or bead blasting the exposed metal portion of the blade.

ULTRABLAC² FINISH is a black oxide finish for greater rust prevention that also provides a tactical look. This special finish is cooked into the metal at 285°F. The finish coating meets and exceeds many military specifications from the U.S. and other elite tactical groups around the world, and is well known for metal protection and abrasion resistance.

MYSTIC CAMO FINISH is a secret finishing process developed by Condor® Tool & Knife to add a random black and grey camo pattern to its blades. This process involves no painting or other surface additions. This special finish becomes part of the blade surface and will not rub off.

EPOXY BLACK POWDER COATING is a heavy black paint finish done by powder coating.

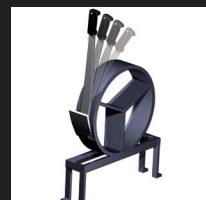

CONDOR® BLACK TRACTION POWDER COATING this is a non-reflective powder coating with a texture, designed for tactical use, rust, and abrasion resistance.

CONDOR® NATURAL FINISH is a bare metal look, that has the appeal of a well worn pair of jeans. There is a special treatment over the top of the blade to help repel rust.

CONDOR® CLASSIC FINISH is a perfected process of hand hammering our Classic Series of axes and knives. It gives a classic and enhanced look to an already well made tool. Our employees use hand powered equipment to put this traditional pattern on, to give it a look as if it was hand forged over 200 years ago. The Classic series is a hit with historical camping fans, mountain men, and colonial period war reenactors.

CONDOR® QUALITY ASSURANCE

CONDOR® TORTURE RING is used constantly to test the quality of our products. Our blades have great flexibility and strength. Quality blades do not need to be thick to perform; thinner, lighter and faster is better. We test all our blades in real world situations so we can get feedback and assure that each piece is a quality tool. Our designers and employees also use tools all over the wildernesses of North, Central, and South America and give feedback to improve product performance.

CONDOR® PRODUCT FEATURES

CONDOR® HANDLE MATERIALS

POSZEGRIP SANTOPRENE® HANDLES are strong but have just the right amount of softness to provide a true cushioned grip. These handles are molded directly to the knife blades, have a non-slip texture, and feature a full tang construction with a metal lanyard eyelet that passes through the tang for added strength.

HIGH IMPACT POLYPROPYLENE HANDLES are strong and indestructible. These handles are molded directly to our machetes and knives blades making them impossible to separate. The tang on our polypropylene handle continues to the back of the handle, with a metal lanyard passing through it for added strength.

AMERICAN HICKORY HANDLES are used in our axes, the wood is selected for proper grain orientation and specially assembled for maximum comfort and durability.

HARDWOOD HANDLES are made from hard woods of Central America, similar to Hickory, and are used in some of our machetes and knives. They are finished with a smooth grip and are known for their long durability.

MICARTA® HANDLES are used in some of our tools, enhancing both the look and function while delivering indestructible phenolic performance.

PARACORD WRAPPED HANDLES are made with real 500 lb test parachute cord that has seven inner strands for further use in a situation, where 1 piece of rope might not be enough. One of the strands inside can also be teased apart further, providing fishing line, sewing thread, or help in any situation where a fine, sturdy line is needed.

CONDOR® SHEATHS

CONDOR® LEATHER SHEATHS are high quality, heavy duty, hand crafted leather. Some of the designs feature a swiveling belt loop that allows the tool to swing out of the way while moving through brush or the jungle. The tool can also be swung out of the way while riding in a truck or car, thus not poking one in the side as a conventional knife sheath.

CONDOR® KYDEX® SHEATHS are hand crafted with quality and pride, and are impervious to the elements. Each comes with a breakaway ball chain necklace.

CONDOR® BALLISTIC NYLON SHEATHS are used in many of our tactical knives as requested by our customers. These sheaths are far quieter than Kydex®, and are MOLLE compliant. Condor's special sheath shop conducted research to find materials that would be sturdy, and each sheath is double stitched and reinforced for heavy duty use.

CONDOR® PRODUCT WARRANTY

LIMITED LIFETIME WARRANTY Condor® tools are warranted to be free of defects in materials, manufacture or assembly for the lifetime of the original purchaser. Damage due to abuse, misuse or neglect is not covered. Defective products will be repaired, replaced or substituted with the same item or item of equal value. To get service under warranty, send the product, postage paid, to the address listed below. You may also have other rights which vary from state to state. Wooden axe handles are not warranted by Condor®, but replacement handles are available for purchase. All of the axe heads are warranted.

SATISFACTION GUARANTEED if for any reason you are not 100% happy with the performance of any of these products, simply return with postage paid to Condor® Tool & Knife, with dated proof of purchase for a full refund.

CONDOR® DESIGNERS

IN MEMORIAL ARLAN D. LOTE (NOV 1943 - JULY 2011) his designs and development philosophies are elemental: improve an existing product or create a new one to satisfy customer wants and needs. Arlan started A.D. Lothe & Associates, Inc. in 1988 as a consulting company for design, product development and marketing, specializing in knives, hand tools and kitchen items. Over the years Arlan designed for and consulted with many nationally known firms, and held over 20 patents, including but not limited to knives, hand tools, broadheads and knife sharpeners. He was an avid hunter, outdoorsman, woodworker, knife and axe thrower, and gourmet chef. His practical experience, as well as over 35 years of creative endeavors, led to numerous awards for his innovations. In 2006, Arlan was inducted into the International Knife Throwers Hall of Fame for "outstanding design." He brought his vast qualifications to his partnership with Condor® in the development of first quality knives and tools for the outdoor market. He will always be honored and remembered.

JOE FLOWERS is responsible for many of the interesting blade designs throughout the pages of the Condor catalog. Joe writes for a myriad of magazines and publications, and contributes regularly to the outdoor community, concentrating in woodcraft and primitive living. His knowledge of outdoor gear led to consulting on equipment design and function for many companies. Joe holds a degree in Zoology with a minor in Entomology, and researches heavily into all things outdoors. Joe Flowers also teaches outdoor skills and survival classes around the US. Locally, he teaches fitness, martial arts, and organizes youth summer camps in his spare time. Joe is an avid naturalist, hunter, fisherman, herpetologist, videographer, beekeeper, knife thrower, guide, and regularly travels internationally in search of knife knowledge and unique animals. You can find Condor® on Joe's side when he is deep in the Amazonian rain forest, or high in the deserts of Utah.

JUAN CAGAMPANG is a recent addition to the Condor design team. He is an outdoor industry veteran with almost fifteen years of experience designing, making and testing award-winning products that range from outdoor clothing, soft goods, tabletop, knives, tools and automotive aftermarket cargo management products. He even had a brief stint as a stuntman for a major motion picture. His work has appeared in numerous publications, including Outside and Adventure magazines, Popular Science and Uncrate. An avid and committed outdoor adventurer, Juan has rock climbed, skied, mountaineered, rafted and bike raced throughout the western United States and South America. He holds a degree in Archaeology, as well as a degree in Industrial Design. He currently lives and works in Portland, Oregon.
