(These tools speak for themselves.)

Guppie™

Hi, I'm the Guppie! I can be a handy wrench, knife, screwdriver, bottle opener, LED light, and I'll hang on a belt loop or D-ring.

U.S. Patent No. D513,579, other patents pending.

Guppie™ Specifications

Model 9070: Bead Blast and Black
Blade Length: 2.0" (5.1 cm)
Blade Steel: 3Cr13, 54-56 HRC
Handle Length: 3.5" (8.9 cm)
Tool Weight: 4.1 oz. (116 g)
Bit Carrier Weight: 1.2 oz. (34 g)

My adjustable wrench jaw opens to 1/2" so you can use me for all kinds of light repair and assembly jobs.

Thanks to my carabiner gate, I'm easy to carry on a belt loop, D-ring, pack or rope. (But, remember, I am not a weight-bearing carabiner.)

And here is my high-carbon stainless steel blade with a Razor-Sharp edge. You can open and close it with one hand.

My removable bit carrier is also a high-intensity LED light. It has two strong magnets to hold it securely to my left side.

My stainless steel clip will hold me in your pocket or on gear. Or you can use it as a handy money clip.

One more trick: My carabiner detent will open bottle caps and metal jar lids!

ZillaTool™

Hi, I'm the Zilla-Tool! I can be a handy pliers, knife, screwdriver, wire cutter, and you can clip me on or carry me in my sheath.

Patents pending.

Zilla-Tool™ Specifications

Model 9060: Bead Blast and Black

Model 9060K: Black-on-Black

Blade Length: 3.0" (7.6 cm)

Blade Steel: 3Cr13, 54-56 HRC

Handle Length: 6.5" (16.5 cm)

Length, blade open: 9.625" (24.4 cm)

Tool Weight: 7.4 oz. (210 g)

Black nylon sheath included.

My pliers jaws are spring loaded, with a slight needle nose taper. They have both fine flat and circular toothed gripping surfaces.

At the base of the pliers, where pressures are greatest, I have a very useful wire cutter.

You can store my two screwdriver hex bits in these handle reliefs. I also accept other standard hex bits.

To open my knife blade quickly, just press this little "flipper". It also acts as a blade guard when it's opened.

My cool custom stainless steel clip will hold me in your pocket or on gear. Or it can be removed if you want to use my nylon sheath to carry me.

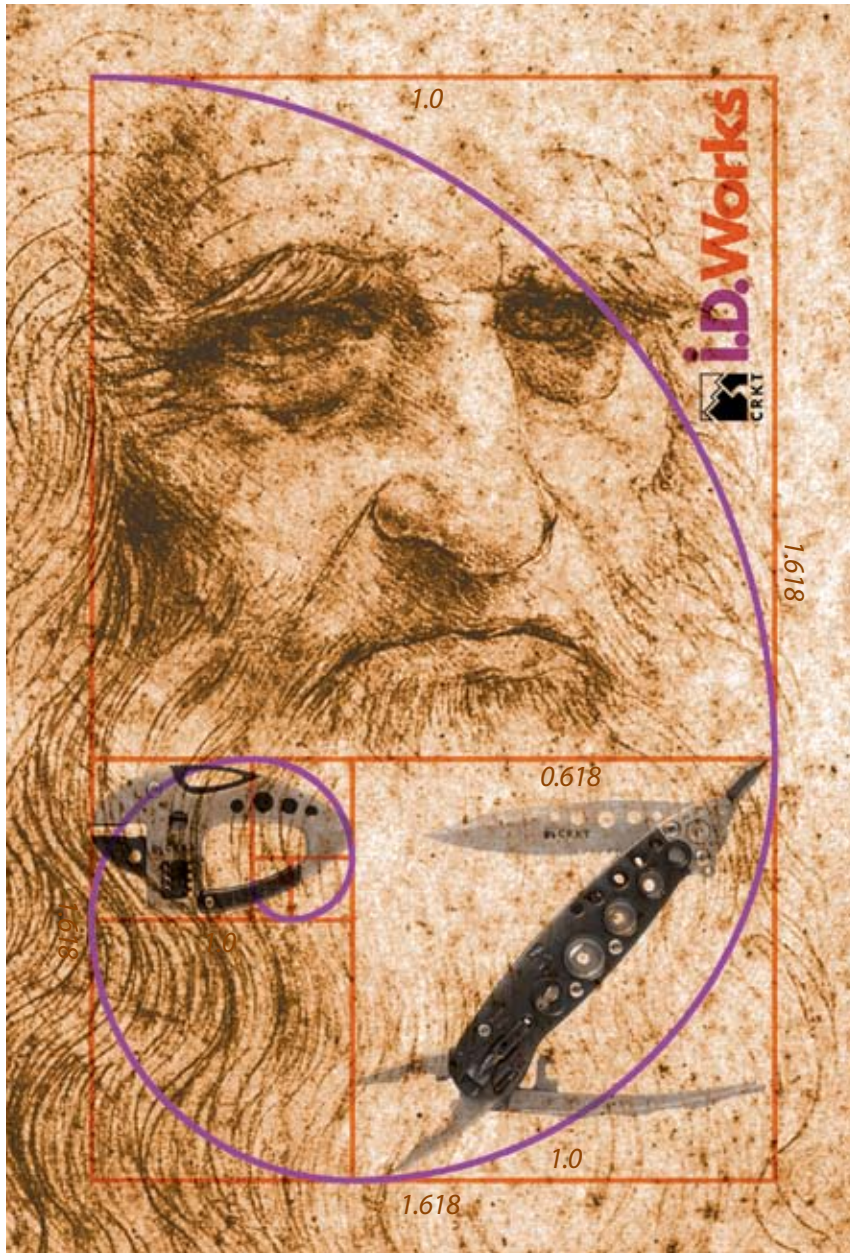

I'm designed with comfortable ergonomic handles so I can help you get a lot of real work done.

CRKT INSPIRED DESIGN WORKS

Yes, Inspired Design works.

Here at CRKT we're inspired by great design and have partnered with the best and brightest designers who share our vision of putting functional art in your hand. These unique tools are the first in our I.D. Works™ line. Put them to use, enjoy them, and always remember what inspires you!

About the Guppie and Zilla-Tool.

These tools were designed and engineered by Launce of Elemental Tools, LLC, and Tom of Nonlinear Evolution Designs, LLC. They believe that thoughtful and functional design needs to be part of your daily life, and they think beyond the traditional to produce useful and striking work tools.

They are award-winning creatives with diverse backgrounds and the skills to design products that challenge industry standards.

Above all, their designs are built to tackle real life situations, and it makes them happy to see their products in use on a daily basis.

They say, "The Guppie was born from the need for a small, pocketable wrench-based tool that could tackle small- to medium-sized jobs. The name comes from its fish-like form." That Launce and Tom were able to pack all the other Guppie features— knife, carry carabiner, screwdriver, bottle opener, bit carrier, hex bits and LED light— into this small package is a tribute to their sophisticated engineering ability.

About the Zilla-Tool, they comment, "This is a departure from worn-out ways of thinking about multi-tool pliers. Most important, it has a techno ergonomic design, without sharp edges to hurt the hand. The pliers do not need to be folded out. They are spring loaded, and are ready for use with the flick of a button. The bit driver and bit storage pockets yield a fully-functional screwdriver. This is a tool you can use to undertake real work."
